FOR IMMEDIATE RELEASE

**JESCRAFT INTRODUCES SIX-WHEEL PIVOTING STONE CART
Transports Multiple Slabs, Turns with Ease**

Bogota, N.J. (June 14, 2010) – Jescraft expands its offering of stone handling equipment with the introduction of its new six-wheel pivoting stone cart (Jescraft model number SWP-5854). Ideal for moving heavy slabs and fabricated pieces inside the shop and at the jobsite, this heavy-duty cart holds up to 3,500 pounds of material and has special forklift pockets for safe and easy lifting. The six-wheel design, which features large center wheels and four swivel casters, provides maximum stability and allows the cart to pivot at a zero degree turning radius for fast, easy maneuvering and passage through tight spaces.

Eyelets and multi-position tie-down bars accommodate ratchet straps to firmly secure loads. All slab supports are covered with heavy-duty rubber strips to keep material from slipping and protect against damage. For economical shipping, the upper A-frame of the cart can be disassembled so the entire cart lies flat.

Jescraft is a leading designer, manufacturer and distributor of material handling equipment and accessories for the stone, concrete, drywall, roofing and other construction-related markets. Founded in 1946, Jescraft products are manufactured in the U.S.A. at the company's Bogota, N.J. facility. Additional information about Jescraft can be found at the company's website at www.jescraft.com or by calling 1-800-524-1142.
