FOR IMMEDIATE RELEASE

**NEW HEAVY-DUTY SLAB BUGGY  
MOVES STONE EASILY AT JOBSITE OR SHOP**

**Bogota, N.J. (May 14, 2010)** – A new single-sided slab buggy by Jescraft represents the company's entrée into the stone handling equipment market. Designed to transport finished or unfinished slabs of stone safely at the factory or building site, this compact, extra-stable cart holds up to 1,850 pounds of material and maneuvers easily through narrow doorways and onto pickup trucks. Large, 10-inch pneumatic tires provide a smooth ride over all kinds of surfaces, even when fully loaded. Steering is enhanced by two polyurethane-on-steel swivel casters which feature pedal lock brakes to prevent accidental rolling. All supports on the buggy are covered with heavy-duty rubber strips to keep slabs from slipping and protect against damage. For economical shipping, the upper A-frame of the slab buggy can be disassembled so the entire cart lies flat. The slab buggy is marketed as Jescraft model number SSB-4845.

Jescraft is a leading designer, manufacturer and distributor of material handling equipment and accessories for the stone, concrete, drywall, roofing and other construction-related markets. Founded in 1946, Jescraft products are manufactured in the U.S.A. at the company's Bogota, N.J. facility. Additional information about Jescraft can be found at the company's website at [www.jescraft.com](http://www.jescraft.com) or by calling 1-800-524-1142.
